Strange NIST-librandomtests parameter introduction.

NIST-librandomtests has a strange parameter introduction, a parameter call (length of bit stream) and program interaction.

You must take into account that NIST-librandomtest has been created to verify that librandomtests.so operates correctly and it is not a project by itself. To deperate NIST-librandomtest would be to spend time.

In DiceLock.org we are concentrated in DiceLock, and NIST-librandomtest is just an internal tool that has been uploaded to allow you to verify that librandomtests.so operates correctly.
